

eBay Filtering Process

1. The first step is to weed out the genuine products. Set your filters as such for each product [Brands] (please reference your price point guide for genuine claims):

The screenshot shows the 'Filter' panel on the right side of an eBay search results page. The panel contains a list of filters, each with a trash icon on the left and a close icon on the right. The filters are:

- Where: Stage is new
- And: Platform is eBay
- And: Brand contains Apple
- And: Brands is any of airpods max
- And: Price (Current) is less than or equal to 325
- And: Name does not contain lot, wholesale, bulk

Below the filters is a '+ Add filter' button and a 'Reset' button. At the bottom right of the panel, it says '3/100 rows'.

2. Once you have completed the process for all products, remove the Name Does Not Contain filter. If there are any bulk or wholesale items, check the price point and move to Analyst Review if they are below genuine price point.
3. Eliminate any items where the Condition contains the following keywords.
 - a. *Sonstige*
 - b. *Used*
 - c. *Other*
 - d. *Open Box*
 - e. *Refurbished*
 - f. *Like New*
 - g. *Ricondizionato*
 - h. *Occas*
 - i. *Opgeknapt*
 - j. *Abierto*
 - k. *Recon*

- Remove all filters and sort by seller. This will allow you to see if sellers are “one-off” sellers or have more than one listing.

- To look up items from a given seller, use SQL for the following:

```

SELECT
  p.product_id,
  p.name AS product_name,
  p.price,
  p.category,
  s.seller_id,
  s.name AS seller_name
FROM
  products AS p
INNER JOIN
  sellers AS s
ON
  p.seller_id = s.seller_id
WHERE
  s.seller_id = '[seller_id]' -- Placeholder for the seller_id parameter from the API request

```

LIMIT

[limit] -- Placeholder for the limit parameter

OFFSET

[offset]; -- Placeholder for the offset parameter
